

UNNAYAN DEFENCE TECHNOLOGIES

Job Title: R&D Electronics Engineering Intern

About Unnayan:

Unnayan Defence Technologies, an innovative defence startup from Hyderabad, India dedicated to redefining national security through cutting-edge product-based solutions. With a resolute commitment to revolutionising the defence sector, we stand ready to equip our armed forces with state-of-the-art tools and technologies.

Our mission is to provide the defence forces with unparalleled product-based solutions that elevate their operational capabilities and readiness. We are passionate about ensuring that our armed forces have access to advanced tools that enable them to excel in the most challenging scenarios.

Driven by our vision, our team of seasoned experts, aim to establish ourselves as trailblazers in the defence technology landscape. Our goal is to set new benchmarks by developing tailored product solutions that seamlessly integrate into the existing defence framework while pushing the boundaries of innovation.

We are proud to share that Unnayan Defence Technologies is an IDEX winner for providing cutting-edge counter-drone solutions. This achievement reflects our dedication to addressing emerging threats and pioneering solutions that enhance national security.

Job Description:

We are looking for a proactive R&D Electronics Engineering Intern to join our team. In this role, you will collaborate with experienced electrical engineers on cutting-edge projects focused on defence solutions

As an intern, you will have the opportunity to gain hands-on experience in designing, testing, and optimising electrical systems or components.

This internship is ideal for students who are passionate about innovation and eager to apply their electrical engineering knowledge in a practical setting.

Responsibilities:

- Assist in the design, simulation, and testing of electronic circuits or systems.
- Conduct experiments and measurements to evaluate the performance of electronic designs.
- Work with PCB design software to create circuit layouts and schematics.
- Configure different type of sensors and actuators
- Collaborate with cross-functional teams to integrate electronic systems into larger projects.
- Troubleshoot electronic issues and propose solutions.
- Document experimental procedures, results, and conclusions.
- Stay updated on the latest developments in electronic engineering technologies and trends.

Qualifications:

- Currently enrolled in a degree program in Electronics Engineering or related field.
- Solid understanding of electronic circuit theory and principles.
- Experience with circuit simulation software (e.g., LTspice, PSpice) is a plus.
- Familiarity with PCB design tools (e.g., Altium Designer, Eagle) preferred.
- Strong analytical and problem-solving skills.
- Ability to work independently and collaborate effectively with team members.
- Excellent written and verbal communication skills.
