

UNNAYAN DEFENCE TECHNOLOGIES

Job Title: R&D Mechanical Engineering Intern

About Unnayan:

Unnayan Defence Technologies, an innovative defence startup from Hyderabad, India dedicated to redefining national security through cutting-edge product-based solutions. With a resolute commitment to revolutionising the defence sector, we stand ready to equip our armed forces with state-of-the-art tools and technologies.

Our mission is to provide the defence forces with unparalleled product-based solutions that elevate their operational capabilities and readiness. We are passionate about ensuring that our armed forces have access to advanced tools that enable them to excel in the most challenging scenarios.

Driven by our vision, our team of seasoned experts, aim to establish ourselves as trailblazers in the defence technology landscape. Our goal is to set new benchmarks by developing tailored product solutions that seamlessly integrate into the existing defence framework while pushing the boundaries of innovation.

We are proud to share that Unnayan Defence Technologies is an IDEX winner for providing cutting-edge counter-drone solutions. This achievement reflects our dedication to addressing emerging threats and pioneering solutions that enhance national security.

Job Description:

We are seeking a motivated R&D Mechanical Engineering Intern to join our dynamic team. As an intern, you will work closely with our experienced mechanical engineers on various projects aimed at developing innovative solutions in [Defence Simulation].

You will have the opportunity to apply your academic knowledge to real-world problems, conduct experiments, analyse data, and contribute to the design and development of new products or processes.

This internship offers valuable hands-on experience and the chance to collaborate with cross-functional teams in a fast-paced R&D environment.

Responsibilities:

- Assist in the design and prototyping of mechanical components or systems.
- Conduct experiments, tests, and analyses to evaluate the performance of mechanical designs.
- Collaborate with engineers and researchers to brainstorm ideas and solve technical challenges.
- Use CAD software to create 3D models and technical drawings.
- Document experimental procedures, results, and findings.
- Support other R&D activities as needed.

Qualifications:

- Currently pursuing a degree in Mechanical Engineering or related field.
- Strong academic background in mechanics, projectile motion, fluid mechanics.
- Proficiency in CAD software (e.g., SolidWorks, AutoCAD) preferred.
- Excellent problem-solving skills and attention to detail.
- Ability to work independently and as part of a team.
- Good communication and interpersonal skills.
