

UNNAYAN DEFENCE TECHNOLOGIES

Job Title: R&D Software Engineering Intern

About Unnayan:

Unnayan Defence Technologies, an innovative defence startup from Hyderabad, India dedicated to redefining national security through cutting-edge product-based solutions. With a resolute commitment to revolutionising the defence sector, we stand ready to equip our armed forces with state-of-the-art tools and technologies.

Our mission is to provide the defence forces with unparalleled product-based solutions that elevate their operational capabilities and readiness. We are passionate about ensuring that our armed forces have access to advanced tools that enable them to excel in the most challenging scenarios.

Driven by our vision, our team of seasoned experts, aim to establish ourselves as trailblazers in the defence technology landscape. Our goal is to set new benchmarks by developing tailored product solutions that seamlessly integrate into the existing defence framework while pushing the boundaries of innovation.

We are proud to share that Unnayan Defence Technologies is an IDEX winner for providing cutting-edge counter-drone solutions. This achievement reflects our dedication to addressing emerging threats and pioneering solutions that enhance national security.

Job Description:

We are seeking a talented Software Engineering Intern to join our innovative team. As an intern, you will work closely with our software developers on exciting projects aimed at defence solutions

This internship provides an excellent opportunity to gain practical experience in software development, contribute to cutting-edge research, and collaborate with multidisciplinary teams.

If you are passionate about technology and eager to learn, we want to hear from you.

Responsibilities:

- Assist in the design, implementation, and testing of software solutions.
- Collaborate with software engineers to develop algorithms, APIs, or user interfaces.
- Participate in code reviews and provide constructive feedback.
- Debug and troubleshoot software issues.
- Research new technologies and methodologies to improve software development processes.
- Document software designs, implementation details, and test procedures.
- Contribute ideas and insights to brainstorming sessions and team discussions.

Qualifications:

- Currently pursuing a degree in Computer Science, Software Engineering, or related field.
- Proficiency in one or more programming languages (e.g., Python, Java, C/C++).
- Familiarity with software development tools and version control systems (e.g., Git).
- Strong problem-solving and analytical skills.
- Understanding of vector mathematics, trigonometry and projectile motion.
- Understanding of different forms of digital and analog signals.
- Ability to work independently and collaborate effectively with team members.
- Excellent communication and interpersonal skills.
