

Job Description

Job Title: Design Intern - Mechanical

Reports To: Mr. Aliasgar Calcuttawala

Job Overview: creating 3D models, designing parts and assemblies, and collaborating with the engineering team.

Responsibilities and Duties:

1. Collaborate with the engineering team to develop and design 3D models, parts, and assemblies using SolidWorks
2. Create detailed technical drawings and specifications for parts and assemblies
3. Perform analysis and testing of designs using SolidWorks simulation tools to ensure they meet requirements and are optimized for performance
4. Assist with prototyping and testing of designs
5. Assist with prototyping and testing of designs
6. Support the development of product documentation, including user manuals, product specifications, and other technical documents
7. Manage design files and ensure they are organized and up-to-date
8. Collaborate with suppliers and vendors to ensure that designs meet quality and cost requirements
9. Support other tasks and projects as required

Qualifications: B.E (Mech), B.E(Industrial Design)

Specific skills:

1. Proficiency in SolidWorks: The ability to create and modify 3D models, parts, and assemblies using SolidWorks is essential for this position.
2. Knowledge of mechanical engineering principles: An understanding of mechanical engineering principles, including materials science, thermodynamics, and mechanics, is important for designing effective and efficient products.
3. Familiarity with drafting and design software: Experience with drafting and design software, such as AutoCAD or SketchUp, is beneficial.
4. Attention to detail: The ability to pay close attention to detail is essential when creating technical drawings and specifications.
5. Strong communication skills: Good communication skills are important for collaborating with the engineering team, suppliers, and vendors.
6. Problem-solving skills: The ability to identify and solve problems is important for developing innovative and effective designs.

7. Time management skills: The ability to manage time effectively and prioritize tasks is important for meeting deadlines and completing projects on time.
8. Analytical skills: The ability to analyze and interpret data, including simulation results and performance metrics, is important for optimizing designs.
9. Creativity and innovation: A creative and innovative approach to design is important for developing unique and effective products.
10. Educational background: A degree or pursuing a degree in mechanical engineering, industrial design, or a related field is beneficial.

Tenure: 3-6 months

Stipend: ____Rs. 12,000 – 15,000 link to performance
